EXPERIENCE

IoT System Engineer

Metayb Pvt. Ltd.

Chennai, India

Mar. 2026 – Present

- Designed and developed **IoT-based industrial solutions** using industrial controllers, sensors, and embedded systems for real-time monitoring applications.
- Implemented reliable device communication using **Wi-Fi, MQTT, and sensor integration** for seamless data acquisition and connectivity.
- Built and deployed end-to-end IoT systems, including hardware setup, device configuration, cloud integration, and dashboard development.
- Performed troubleshooting, debugging, and performance optimization to ensure system reliability, scalability, and operational efficiency.
- Collaborated with cross-functional teams to deliver production-ready IoT products while maintaining data security, quality standards, and documentation.
- Contributed to system testing, validation, and continuous improvement initiatives to enhance product functionality and user experience.

IoT Trainer & Project Mentor

Suryodaya College of Engineering & Technology

Nagpur, India

Dec. 2023 – Mar. 2026

- Delivered hands-on training sessions on **industrial IoT systems and embedded solution development** for engineering students.
- Mentored students on real-world product-based projects including smart devices and automation systems
- Interacted with industry professionals and academic leadership while conducting technical workshops
- Guided students in building deployable prototypes rather than academic-only projects

IT Associate

Cinépolis India

Nagpur, India

Oct. 2022 – Nov. 2023

- Led end-to-end IT operations for multiplex infrastructure, managing systems, networks, and on-ground technical support
- Handled a team of technicians and vendors; ensured **99% uptime** of critical theatre systems during operations
- Planned and executed IT rollouts for new screens and upgrades, coordinating with cross-functional teams
- Resolved high-priority incidents under tight timelines, reducing average issue resolution time by 30%
- Acted as the primary point of contact between operations, vendors, and corporate IT teams

Jr. Frontend Developer

StafCloud

Remote

Jan. 2021 – Sept. 2022

- Developed and maintained responsive web applications using HTML, CSS, JavaScript, and backend integrations
- Collaborated with designers and product teams to convert requirements into production-ready features
- Optimized website performance and UI flows, improving load times and overall user experience
- Worked on multiple client projects simultaneously while meeting delivery timelines

PROJECTS

UHF-Based Vehicle Monitoring and SAP Integration System

- Developed an automated vehicle identification and monitoring solution using **UHF RFID technology** for real-time vehicle tracking, gate automation, and access control.
- Integrated vehicle movement data with **SAP systems**, enabling automated record management and improved operational visibility.
- Designed and implemented RFID reader interfaces, database connectivity, and monitoring dashboards for centralized vehicle management.
- Successfully deployed the solution at **CDBL, Haryana** and international sites including **Guinness Nigeria PLC** and **Tolaram Group, Nigeria**.
- Reduced manual logging efforts, improved vehicle traceability, and enhanced data accuracy through automated identification and reporting.

AI-Based Fire Detection Camera System

- Designed and deployed an AI-powered fire and smoke detection system using intelligent surveillance cameras for industrial safety applications.
- Implemented real-time fire event detection, automated alarm generation, and remote monitoring through cloud-based dashboards.
- Integrated camera analytics with IoT platforms to provide continuous monitoring, event logging, and instant notifications.
- Successfully deployed the solution at **Insignia Nigeria**, enhancing fire safety compliance and reducing incident response time.
- Managed end-to-end system deployment including camera configuration, network integration, testing, commissioning, and technical support.

AI Dashcam Fleet Monitoring System

- Designed and deployed an AI-powered dashcam solution for fleet safety, driver behavior monitoring, and vehicle surveillance.
- Implemented real-time event detection capabilities including distracted driving, fatigue detection, harsh braking, collision alerts, and unsafe driving behavior analysis.
- Integrated dashcam data with cloud-based monitoring platforms for remote fleet visibility, video analytics, and incident reporting.
- Successfully conducted a pilot deployment across **20 commercial trucks at BHN Nigeria**, validating system performance under real-world operating conditions.
- Managed device installation, configuration, testing, data connectivity, performance evaluation, and stakeholder reporting throughout the pilot phase.

Smart Washroom Monitoring System

- Designed and deployed an IoT-based smart washroom monitoring solution using ESP32 and sensors
- Installed **32+ devices at Rourkela Steel Plant, Odisha** and **5 devices at NTPC Mauda**
- Enabled real-time monitoring of usage, cleanliness status, and automated alerts
- Improved maintenance response time and reduced manual inspection overhead

VAJRA Electric Fence Protection System

- Built an IoT device to **detect and prevent unauthorized use of electric fences**
- Integrated edge computing controllers, energy monitoring units, cellular communication modules, local data storage, alert mechanisms, and industrial display interfaces.
- Provides real-time power monitoring, tamper detection, and alert notifications
- Designed as a field-deployable solution for agricultural and industrial safety

RFID-Based Smart Attendance System

- Designed and implemented an RFID-based automated attendance management system

- Enabled secure identity verification to minimize proxy attendance
- Integrated contactless identification hardware with embedded control and alert interfaces
- Improved attendance accuracy and reduced manual administrative effort

Biometric Access Control System

- Developed a biometric-based access control system for secure entry management
- Implemented authenticated access with electronically controlled locking mechanisms
- Designed for residential and institutional security applications

Animal Deterrent System

- Built an IoT-based animal deterrent system to protect farms and restricted areas
- Uses sensors and automated deterrent mechanisms to prevent animal intrusion
- Optimized for low-power, outdoor operation with minimal human intervention

IoTronics Kit Applied IoT Training Platform

- Designed a modular, hands-on IoT training platform focused on real-world system design and deployment
- Includes integrated sensing, actuation, and control modules mapped to practical problem statements
- Used in workshops and academic programs to teach applied IoT concepts, system integration, and troubleshooting
- Enabled learners to move beyond simulations by building deployable, end-to-end IoT solutions

Low-Latency Wireless Control System

- Developed a low-latency wireless control system for real-time remote vehicle operation
- Implemented precise motor control, speed regulation, and auxiliary switching functions
- Achieved direct device-to-device communication without reliance on network infrastructure

Wearable Fitness Monitoring System

- Developed a wearable fitness monitoring system with onboard motion sensing and display interface
- Implemented activity tracking, motion analysis, and calorie estimation algorithms
- Provided a local web-based dashboard through an embedded wireless access interface

Embedded Video Streaming System

- Developed an embedded video streaming system for real-time visual monitoring
- Integrated camera interfaces and optimized streaming performance over wireless networks
- Demonstrated applications in surveillance and remote monitoring scenarios

EDUCATION

Government Polytechnic, Gondia

Aug. 2016 – May 2019

Diploma in Computer Engineering – 84%

Gondia, India

- Focused on computer programming, data structures, database systems, and embedded system fundamentals
- Completed multiple applied technical projects aligned with real-world problem statements

Maharashtra State Board of Secondary & Higher Secondary Education

June 2015 – Mar. 2016

Secondary School Certificate (SSC) – 85.20%

Maharashtra, India

- Strong academic foundation with emphasis on mathematics, science, and analytical problem-solving

ACHIEVEMENTS

Professional & Academic Achievements

- Led the end-to-end deployment of industrial IoT solutions across large-scale facilities, including **32+ devices at Rourkela Steel Plant** and **5 devices at NTPC Mauda**. Responsibilities included requirement analysis, system configuration, on-site installation, testing, and post-deployment validation. Coordinated with operational and maintenance teams to ensure stable real-world performance under industrial conditions.
- Under my leadership, **Suryodaya College of Engineering & Technology** was recognized by the **India Book of Records** for organizing a **Sustainable Development Goals (SDG) focused offline hackathon** with **800+ student registrations from across India**. I led the planning, coordination, and execution of the event, including outreach, participant management, technical framework design, and on-ground operations. Ensured alignment with SDG objectives, compliance with record guidelines, and successful large-scale execution, contributing directly to achieving the national record.
- Served as a **Smart India Hackathon (SIH) Mentor**, supporting student teams throughout the competition lifecycle. Guided teams in understanding problem statements, designing system architectures, integrating hardware and software components, and refining working prototypes. Emphasized feasibility, scalability, and real-world applicability over theoretical solutions.
- Invited as a **Speaker at IIM Nagpur** to deliver expert sessions on innovation-driven thinking and applied technology development. Shared practical insights on transforming academic ideas into deployable products, with a focus on IoT-based solutions and execution challenges. Engaged participants through interactive discussions on industry expectations, validation, and product readiness.
- Acted as a **Judge for Central India Hackathon Nagpur**, evaluating projects across multiple technical domains. Assessed teams on system design quality, technical depth, scalability, and real-world relevance. Provided structured feedback to help participants strengthen feasibility, clarity, and execution readiness.
- Consistently recognized for **technical leadership and mentoring impact** across academic and industrial environments. Played a key role in bridging the gap between classroom learning and industry-grade solution development. Known for hands-on guidance, clear technical communication, and execution-focused leadership.

SKILLS

Programming & Embedded Systems : C, C++, Python, Embedded C, firmware development

Embedded Hardware Platforms : Edge computing devices, low-power embedded controllers, single-board systems

Protocols & Networking : Wireless communication, device-to-device communication, MQTT, HTTP, serial interfaces

Sensing & Control Systems : Contactless identification systems, biometric authentication, motion sensing, energy monitoring, actuator control

IoT & Cloud Platforms : Device management platforms, telemetry dashboards, rule engines, data logging systems

Development & Design Tools : Embedded IDEs, version control systems, UI/UX tools, technical documentation tools

Productivity & Office Tools : Microsoft Word, Excel, PowerPoint, Google Workspace

Professional Skills : Team leadership, project coordination, technical training, client interaction, requirement documentation

Self-Declaration

I hereby declare that the information provided above is true and correct to the best of my knowledge and belief.
